LONGWALL HIGH PERFORMANCE HYDRAULIC HOSE & STAPLE CONNECTIONS

DN63 -350bar (5076psi) FLUSHFIT

The performance and speed of underground mining equipment is controlled by the amount of fluid that can be delivered to the Coal Face and how efficiently this fluid can be returned to the pumping station.

Manuli / MIP are leading the world in both the technology for high performance large bore mining hoses and staple connections including the DN63 – 350bar Diamondspir six spiral hose fully tested and certified with the unique 'FLUSHFIT' staple connection.

To compliment the high pressure feed line a DN76 – 70Bar Rockmaster / 2Plus return line hose assembled with the FLUSHFIT staple connection completes the circuit.

DN76 -70bar (1015 psi) FLUSHFIT
